

Rough set approach to reasoning under uncertainty is based on inducing knowledge representation from data under constraints expressed by discernibility or, more generally, similarity of objects. Knowledge derived by this approach consists of reducts, decision or association rules, dependencies, templates, or classifiers. This monograph presents the state of the art of this area. The reader will find here a deep theoretical discussion of relevant notions and ideas as well as rich inventory of algorithmic and heuristic tools for knowledge discovery by rough set methods. An extensive bibliography will help the reader to get an acquaintance with this rapidly growing area of research.

Victorian Types, Victorian Shadows (Routledge Revivals): Biblical Typology in Victorian Literature, Art and Thought, Guide to Russian Literature: Against the Background of Russias General Cultural Development, Marlowe versus Shakespeare: Wrongful Death and Double Identity, Tamburlaine and Edward II: Text and Performance (Text & Performance), Villain, The Best Things Ever Said in the Dark: The Wisest, Wittiest, Most Provocative Quotations from the Movies, Spectacle Entertainments of Early Imperial Rome, Literary History of Canada: Canadian Literature in English: Second Edition, Vol. 3, Sonata for Violin and Piano in B,
